

Release wax

Auxiliary Materials for Molding / SC-9D34EB27E2D1

PRODUCT OVERVIEW

Release wax is a paste-like chemical release agent with wax as the main component. Its core function is to form a uniform, low-surface-energy film by coating it on the mold surface, enabling easy separation of composite products from the mold. At the same time, it can improve the surface finish of the products. It is widely used in composite material molding (such as hand lay-up, vacuum bagging, and compression molding processes), and is especially suitable for complex curved surface molds and high-precision products.

CONFIGURATION DATA

MATERIAL FAMILY	Composite solution
SUPPLY FORM	Tooling
DIMENSIONS / TOLERANCES	Configured to project requirements in SI / metric units
TECHNICAL DOCUMENTATION	Lot- and configuration-specific documentation available with quotation
AVAILABILITY	Made to order / project supply

DOCUMENTATION & COMPLIANCE

ISO, REACH, RoHS and material certificates are confirmed per selected grade, manufacturer, lot and intended application.
