

Sealer

Thermosetting Resin / SC-424482944369

PRODUCT OVERVIEW

A sealant is a functional material used to seal pores, tiny defects, or active groups on the surface of materials. Its core function is to form a dense protective film on the material surface, thereby improving its corrosion resistance, wear resistance, sealing performance, and surface finish. It is widely used in fields such as metal surface treatment, concrete, stone, electronics, and composite materials. It is a key auxiliary material for extending the service life of materials and optimizing product performance.

CONFIGURATION DATA

MATERIAL FAMILY	Resin system
SUPPLY FORM	Industrial component
DIMENSIONS / TOLERANCES	Configured to project requirements in SI / metric units
TECHNICAL DOCUMENTATION	Lot- and configuration-specific documentation available with quotation
AVAILABILITY	Made to order / project supply

DOCUMENTATION & COMPLIANCE

ISO, REACH, RoHS and material certificates are confirmed per selected grade, manufacturer, lot and intended application.
