

Tooling board

Auxiliary Materials for Molding / SC-AE5DAB5BFAA3

PRODUCT OVERVIEW

Daimu is an artificial composite material made with resin as the matrix and plant fibers/inorganic fillers as reinforcing materials. Its core function is to replace natural wood, and it has both "the processability of natural wood" and "better weather resistance, waterproofness, and anti-deformation performance than natural wood". It is widely used in scenarios such as outdoor building materials, advertising decoration, and industrial parts, and is especially suitable for environments where natural wood is prone to rot and deformation.

CONFIGURATION DATA

MATERIAL FAMILY	Composite solution
SUPPLY FORM	Tooling
DIMENSIONS / TOLERANCES	Configured to project requirements in SI / metric units
TECHNICAL DOCUMENTATION	Lot- and configuration-specific documentation available with quotation
AVAILABILITY	Made to order / project supply

DOCUMENTATION & COMPLIANCE

ISO, REACH, RoHS and material certificates are confirmed per selected grade, manufacturer, lot and intended application.
